

# Equipment Built on Concrete Experience

**WACKER  
NEUSON**  
*all it takes!*

## Concrete expertise that delivers from start to finish.

Contractors know finished concrete depends on quality processes. So do we. Wacker Neuson has earned the respect of concrete professionals from prep to pour, form to finish with internal and external vibrators, wet screeds and trowels that deliver success on any job, no matter how big or small. Our equipment helped build the Hoover Dam Bypass, restore the Lincoln Memorial and expand the Panama Canal. And it will come through for you, no matter what's required.

**Commercial/Industrial Flatwork:** Wacker Neuson machines deliver the torque, speed and added features that take results from good to exceptional—which leads to more winning bids.

**Commercial/Industrial Vertical Contractors:** Save time and money with our easy-to-use equipment. It's comfortable to operate, versatile and maintains high performance job after job.

**Residential Contractors:** Designed for the unique demands of driveways, garages and basements, Wacker Neuson equipment offers versatility and reliability.

## Work with the concrete experts who work alongside you.

We bring dealers and support staff to our training headquarters in Wisconsin and teach them how to work with concrete using our equipment. They leave Wacker Neuson Technical Academy knowing how to make these machines handle your applications, and that experience helps you work faster and easier, and saves money.

- **Industry-leading training:** Our ACI-certified personnel have trained our dealers to use Wacker Neuson equipment. And you'll find the people we've trained all over the country, because nobody has more support staff in their network than Wacker Neuson.
- **Quality tested against the toughest standards:** Two teams separately test everything before it's released. Not just once, but for hour upon hour upon hour. Double testing ensures you get top-of-the-line machines that stay up and running—helping you avoid costly downtime.
- **Warranty:** Our equipment includes warranties that meet or greatly exceed the industry standard, in some cases offering coverage lasting twice as long as the competition.

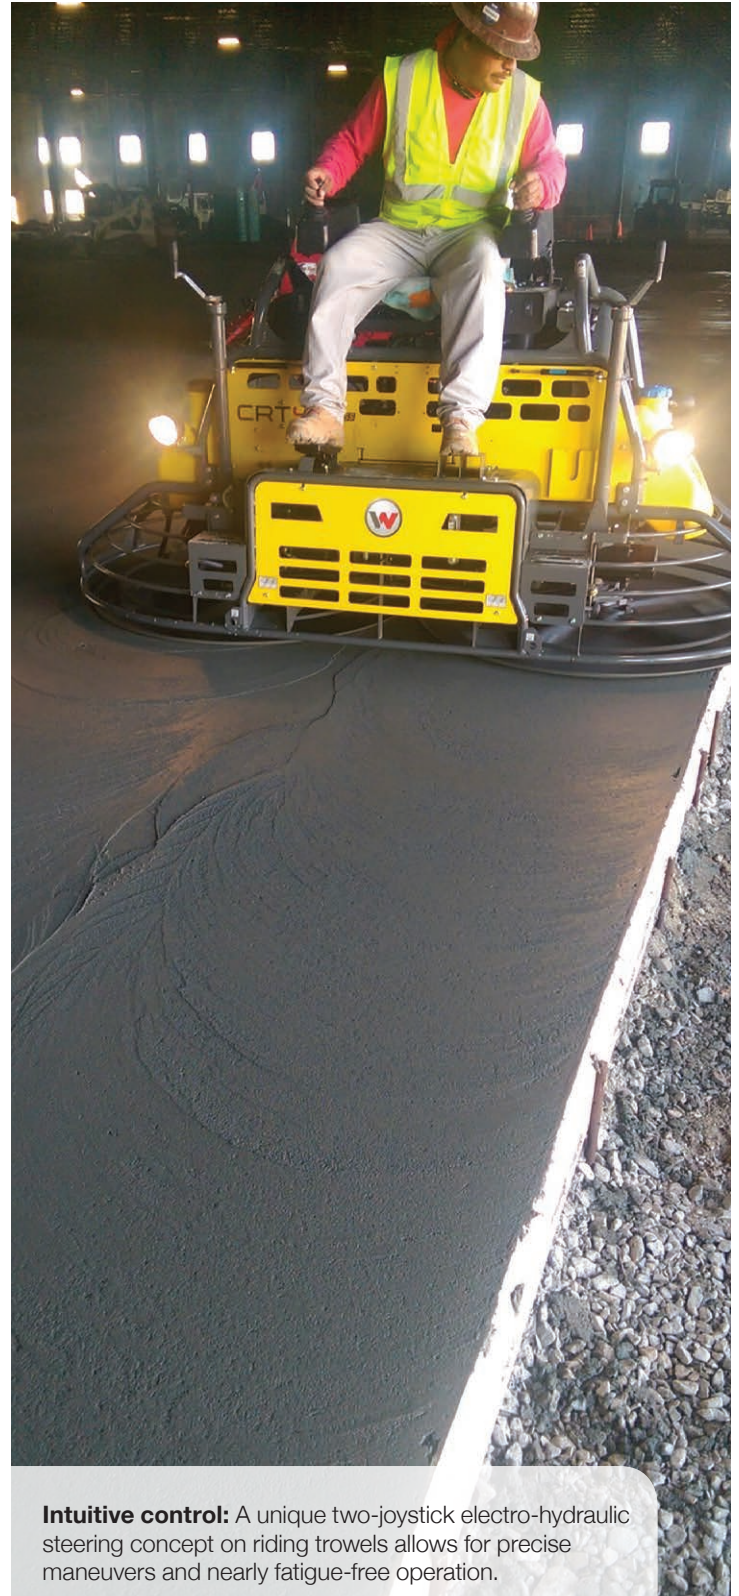

# Commercial Flatworkers: Improving performance every step of the way.

Get better results from equipment designed to boost your performance—without requiring you to change techniques. Wacker Neuson machines are easy to use, easy to move, durable and precise, which leads to consistently flatter floors—and more winning bids.

**Versatility:** Portable gasoline vibrators with a comfortable backpack provide high-impact, high-frequency concrete vibration.

**Ergonomic design:** Dynamic balancing gives the user nearly effortless operation and maximum trowel control at all speeds with all blades, including float pans.

**Intuitive control:** A unique two-joystick electro-hydraulic steering concept on riding trowels allows for precise maneuvers and nearly fatigue-free operation.

## What our customers say ...

*"Job after job, small projects and large, Wacker Neuson concrete equipment delivers. Superior performance and the best customer service are just the start. The price is right and, more importantly, the floors are flat. Our customers expect it, and so do we."*

Dan Hill, Scheduler, ACE AVANT

**More efficient finishing:** The CT24 works to within 1/8 inch of a wall and is ergonomically designed for operator comfort.

**Boost your performance:** The CRT60 frame is so rigid it's been shown to boost full flatness numbers through standard use. No need to change techniques.

**Built-In Hydraulic Wheel Kit:** Move our CRT60 ride-on trowel off the slab with ease—just raise it onto the wheels and push. This exclusive feature also makes it simple to change blades and remove pan floats.

**Increased horsepower:** We design, engineer and build our ride-on trowels, so you get the torque and speed required on big industrial floors.

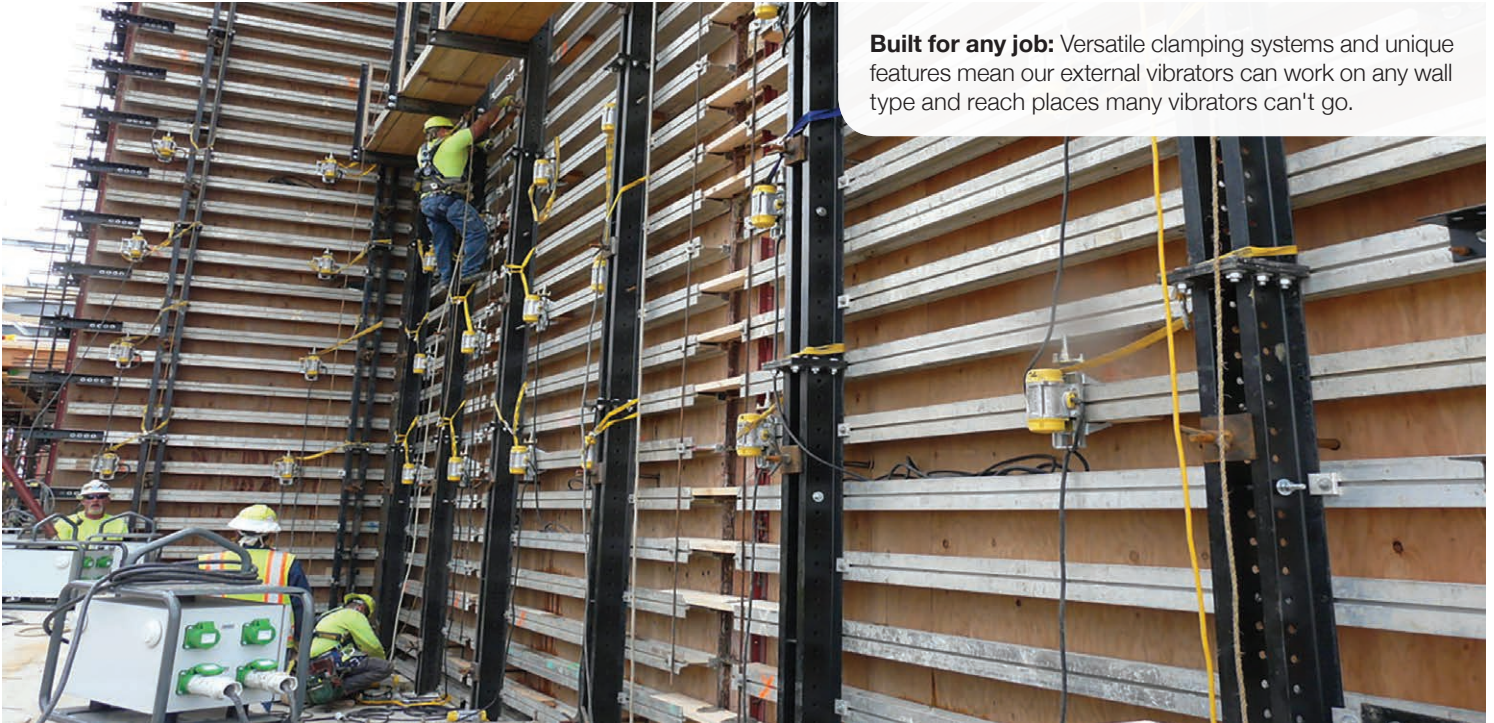

**Easier to pan:** The variable-speed clutch on select walk-behind trowels makes it easier to pan, and the unique position of the engine balances the machine, greatly reducing forces felt by the finisher.

**Work efficiently:** Walk-behind trowels are designed to reduce operator fatigue, allowing for increased productivity.

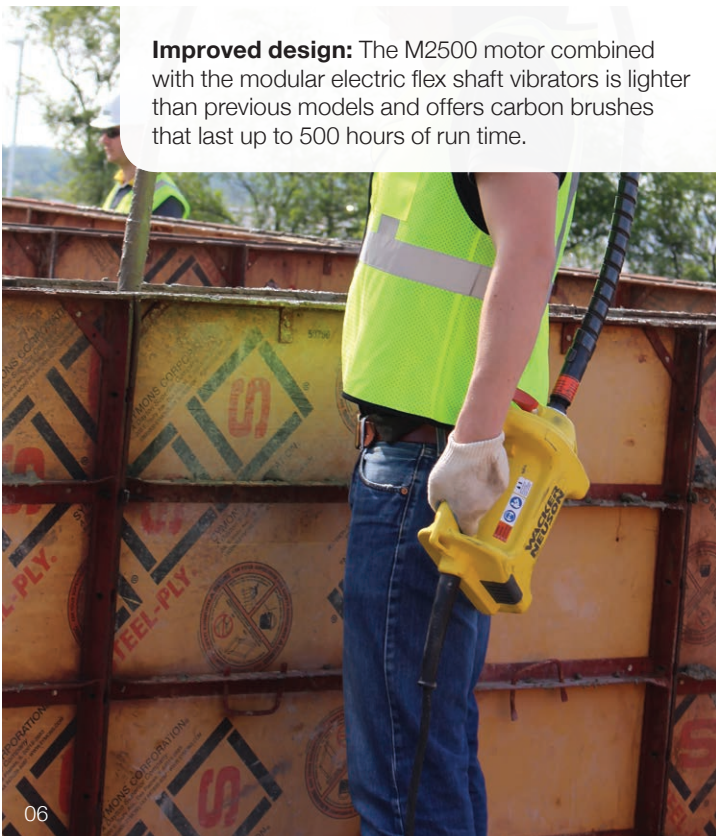

# Commercial Vertical Contractors: Increasing efficiency and lowering costs.

Versatile features on easily operated machines help you stay up and running, which means greater productivity. That's how Wacker Neuson helps you accomplish more. And we back it up with product support unlike anyone else.

**Built for any job:** Versatile clamping systems and unique features mean our external vibrators can work on any wall type and reach places many vibrators can't go.

**Improved design:** The M2500 motor combined with the modular electric flex shaft vibrators is lighter than previous models and offers carbon brushes that last up to 500 hours of run time.

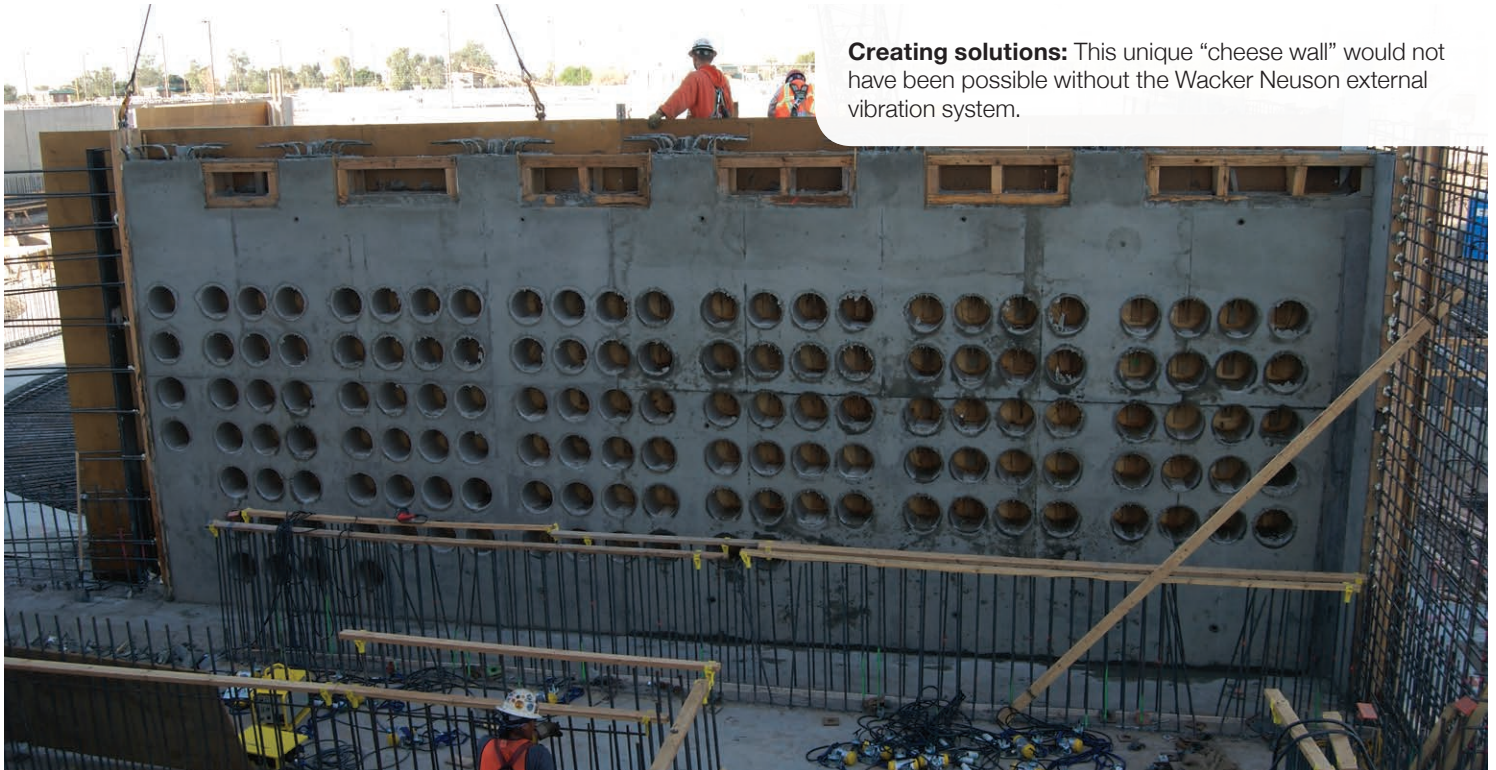

**Making difficult work easier:** The Wacker Neuson external vibration system makes challenging window openings easier to accomplish.

## What our customers say ...

*"I have always used Wacker Neuson high-cycle vibrators and have nothing but good to say about them. On a recent job, I needed 30-foot vibrators for wall widths of 24 inches. These vibrators never failed and do an amazing job for a superb final product. Wacker Neuson vibrators are the only brand Garney uses and I would highly recommend them."*

Tim Diamond, General Superintendent, Garney Construction

**Creating solutions:** This unique "cheese wall" would not have been possible without the Wacker Neuson external vibration system.

**Get at hard-to-reach places:** External vibration systems mount to wall forms, allowing you to get to places an internal vibrator normally could not.

**Versatile clamping system:** Use our external vibrators on most form types, thanks to clamps that fit everything from gang forms to hand-set forms.

**No specialty generator needed:** Giving you one less thing to worry about, Wacker Neuson's IRFU high-cycle vibrator operates with an integrated frequency inverter. Just plug it into any 120-volt outlet.

**Reduced cost:** Our streamlined lineup includes the M1500 and M2500 internal vibrator motors. They cost less than older models, yet remain light and versatile while delivering the same performance.

**Industry-leading warranties:** The M1500 and M2500 motors in the Wacker Neuson Head, Motor, Shaft (HMS) internal vibration system come with a two-year warranty. Other manufacturers don't match that support and only offer a year.

# Residential Contractors: Finishing the job with simple convenience.

Working on concrete for a residential application requires equipment that's simple to operate, saves you time and gives you the flexibility to handle a larger number and greater variety of jobs. Our screeds and trowels deliver the versatility and performance that creates efficiency and generates profit.

**Optimum user comfort:** Twin handles on our wet screed are fully height and angle adjustable for maximum operator comfort. Its specialized design also reduces vibration.

**Tools for the trade:** Our 14-inch cutoff saw is durable and robust, with a balanced design that makes it easy and intuitive to operate.

**Versatile vibrators:** Our flex shaft vibration system gives you versatility on the job. Combine a variety of shafts and heads to fit any application.

## What our customers say ...

*"After being convinced to try a Wacker Neuson walk-behind trowel, I will never go back to finishing basement floors on boards. The training provided by Wacker Neuson went above and beyond. The amount of hand labor I save every day has enabled me to take on more jobs and helped grow my business."*

Jon Susitti, Owner, Susitti Construction

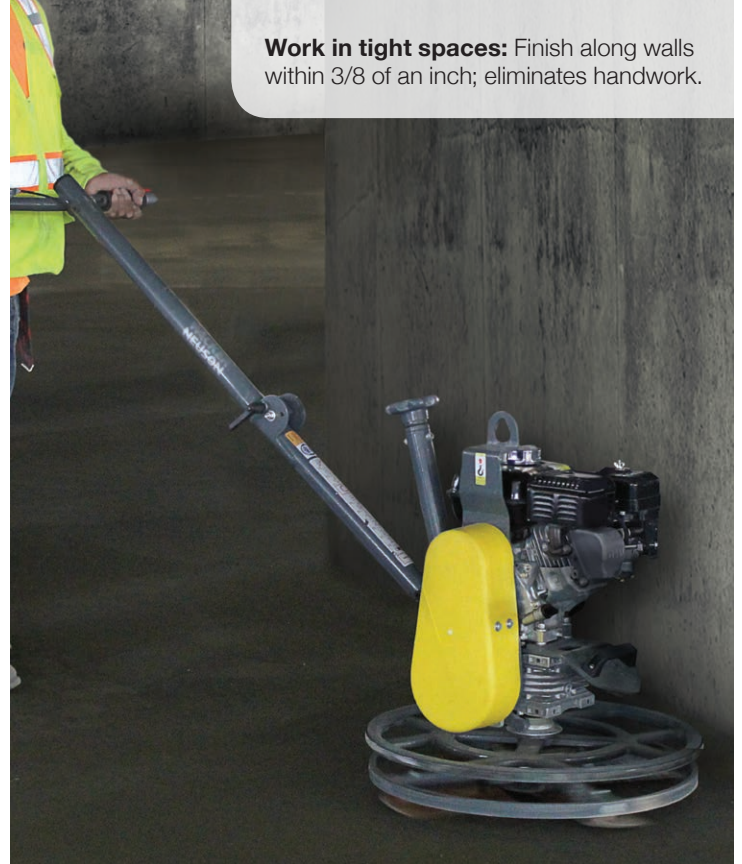

**Durable performance:** The M motors used with our flex shaft vibrators offer extremely long service life, in part because of the double-insulated construction with increased thermal capacity and easy-access air filter.

**The best fit:** The 36-inch trowel diameter on our CT36 walk-behind makes it the ideal machine to finish medium-sized areas.

**Work in tight spaces:** Finish along walls within 3/8 of an inch; eliminates handwork.

**Features to fit the job:** Wacker Neuson wet screeds can be configured with blades ranging from 4 feet to 16 feet in a 4.9-inch width, so you get the equipment to fit your needs.

**Fold-over handle:** Our CT series trowels feature a fold-over handle for easier transport and movement in tight spaces—even through a standard window.

**Easy to move on the job:** Our CT36 trowel is sized to pass through a stairwell, so you can get it to the basement and finish the floor.

**High production:** Get quick and accurate strike-off of concrete slabs with our wet screeds, with or without the support of grade stakes or forms.

## A full line for the pro concrete contractor.

For every job, there's a Wacker Neuson machine that can help you work faster, easier and more efficiently. We also offer a range of accessories to complement them. Your Wacker Neuson dealer is ready to work with you to get the equipment that best serves the unique demands of your business.

### What our customers say ...

*"The concrete consolidation training provided by Wacker Neuson in our Washington, D.C., market demonstrated the company's competency and understanding of the professional contractor's needs. Wacker Neuson engineers and builds tough designs to withstand tough job-site conditions and supports it with training and technical support that helps us maintain our edge."*

Chuck Fiala, Senior Project Manager, Baker Concrete Construction Inc.

## More than equipment.

Products are only as good as the service, technical support and training behind them. Wacker Neuson and our network of dealers provide everything you need to keep running at peak performance.

### Parts and Service

If equipment breaks, concrete doesn't get poured and job delivery is delayed. Parts and service can't wait. That's why all Wacker Neuson parts are available via our U.S. distribution center and are typically shipped within 24 hours of your order. You can count on getting the parts, service, maintenance and support you need, when you need it.

### Technical Training and Support

Wacker Neuson Technical Academy has been meeting the training needs of contractors and dealers for years. Training classes are led by ACI-certified experts with decades of experience in the field at our production facility in Menomonee Falls, Wisconsin, just minutes from Milwaukee. Or, we can bring our experts to your operation to create a program that works for you.

## Ask your Wacker Neuson dealer about our warranty and financing programs.

Giving you the most dependable performance for your money includes backing it up with a generous warranty—often exceeding any other offer available. Ask your dealer about warranty offers specific to the Wacker Neuson concrete technology you need. And talk to your dealer about our extended service protection plan. Valid in the USA and Canada.

**Flexible finance options:** We offer financing and lease programs that help you get the most machine for your money.

- Low down payments
- Zero percent seasonal payment options
- Cash-back options

# It's more than equipment. It's your livelihood.

**WACKER  
NEUSON**  
*all it takes!*

With a combined 150-plus years of experience in concrete, Wacker Neuson not only knows your industry, our people are also helping shape it. And our proven engineering creates machines that are backed up by industry-leading product support. This commitment to concrete, from our people to our products, is why Wacker Neuson delivers more for you in every piece of equipment we make.

## Here's why Wacker Neuson is a smart choice:

**Proven equipment for every application.** All Wacker Neuson equipment goes through double testing. Separate teams test it to ensure our machines hold up to the most demanding work before it goes out the door. So, everything we make, whether it's getting used on a 4-million-square-foot Amazon distribution center or a simple suburban driveway, can help you win bids and save money.

**Experts who work in the industry.** We are voting members of the American Concrete Institute (ACI) and the American Society of Concrete Contractors (ASCC), as well as ACI-certified trainers. We're in the field, committed to the field and leading the field, because we know how a concrete contractor works.

## The highest quality from production to support.

Wacker Neuson engineering brings you top-of-the-line equipment. We support you with a large dealer network trained by our ACI-certified personnel. And we back up these products with warranties that meet or greatly exceed our competition.

Nobody works smarter to support your business than Wacker Neuson. Our equipment and people have a legacy of success in the concrete industry and are prepared to help you accomplish more. Just ask your Wacker Neuson dealer. That's all it takes.
